

OTC Allied Health Simulation Center

We want to help YOU save a life!

According to the American Heart Association (AHA) more than 500,000 adults and children in the US experience a cardiac arrest, and less than 15% survive. High-quality CPR is the primary component in influencing survival from cardiac arrest and the Simulation Center at OTC is ready to help improve these outcomes.

Our QCPR manikins come equipped with software that provides feedback in the five key components of high-quality CPR:

- Minimize interruptions in chest compressions
- Provide compressions of adequate depth
- Ensure compressions are fast enough
- Avoid leaning between compressions
- Avoid excessive ventilation

This feedback ensures you are providing CPR at the highest standard possible. We offer AHA certifications in Basic Life Support (BLS) for healthcare providers (HCP) and training for lay persons in first-aid, blood-borne pathogens, and Heartsaver CPR/AED. You can choose either a seated course for your group of six or more or a blended course if you prefer learning at your own pace through online instruction followed by a hands-on skills session.

Through better measurement and training in CPR, we can have a significant impact on survival from cardiac arrest and eliminate the gap between current and optimal outcomes.

Healthcare Professionals:

Heartcode for BLS Online Course: \$60

(includes online cost, skills session, and BLS Provider certification card)

BLS Provider Seated course for groups of 6 or more: \$60

(includes up to 5 hours of instruction, BLS provider manual and certification card)

Non-Healthcare Providers:

Heartsaver CPR/AED: \$60 per person

First-Aid and Bloodborne pathogens course:

Please call for more information.

We welcome corporate groups and are happy to come to your workplace.
